

AWS Static Website Deployment using Amazon S3 and CloudFront

-Harini Shanmugavel

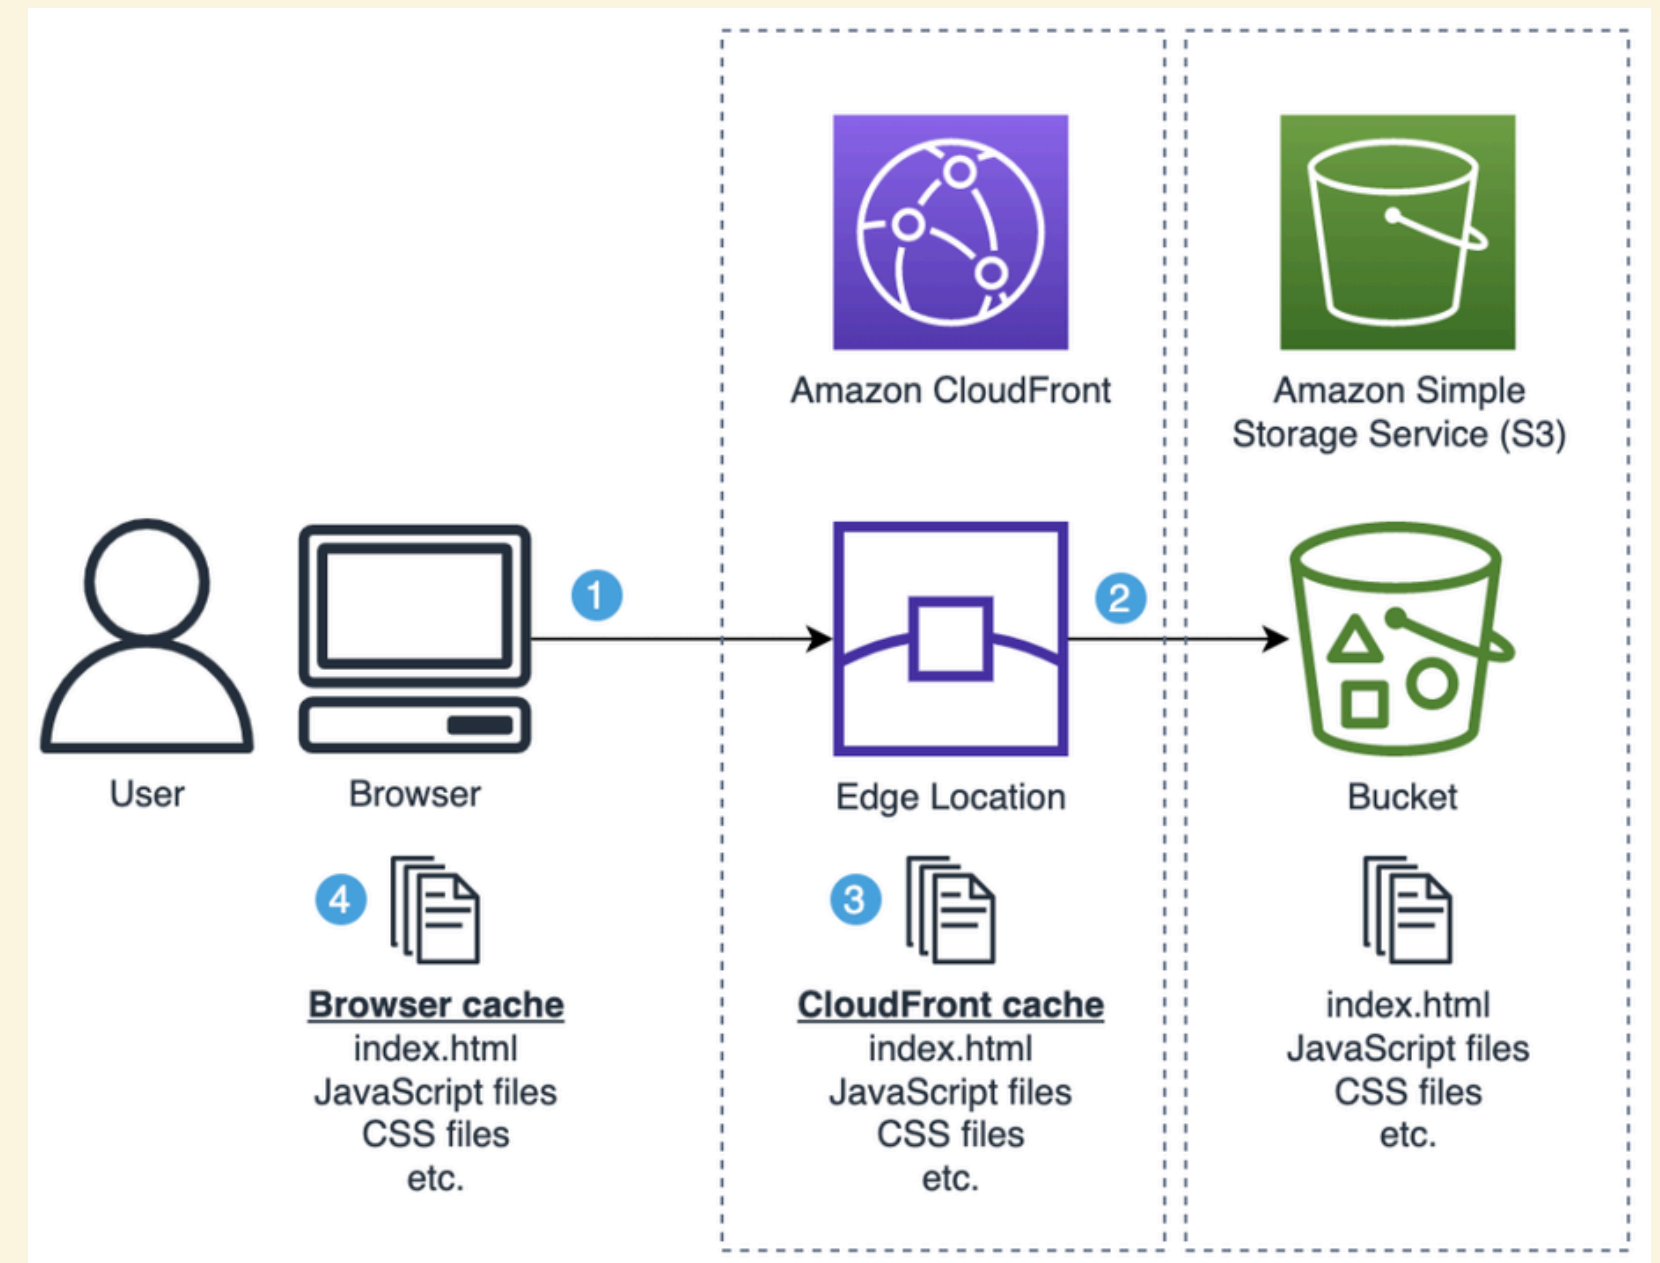

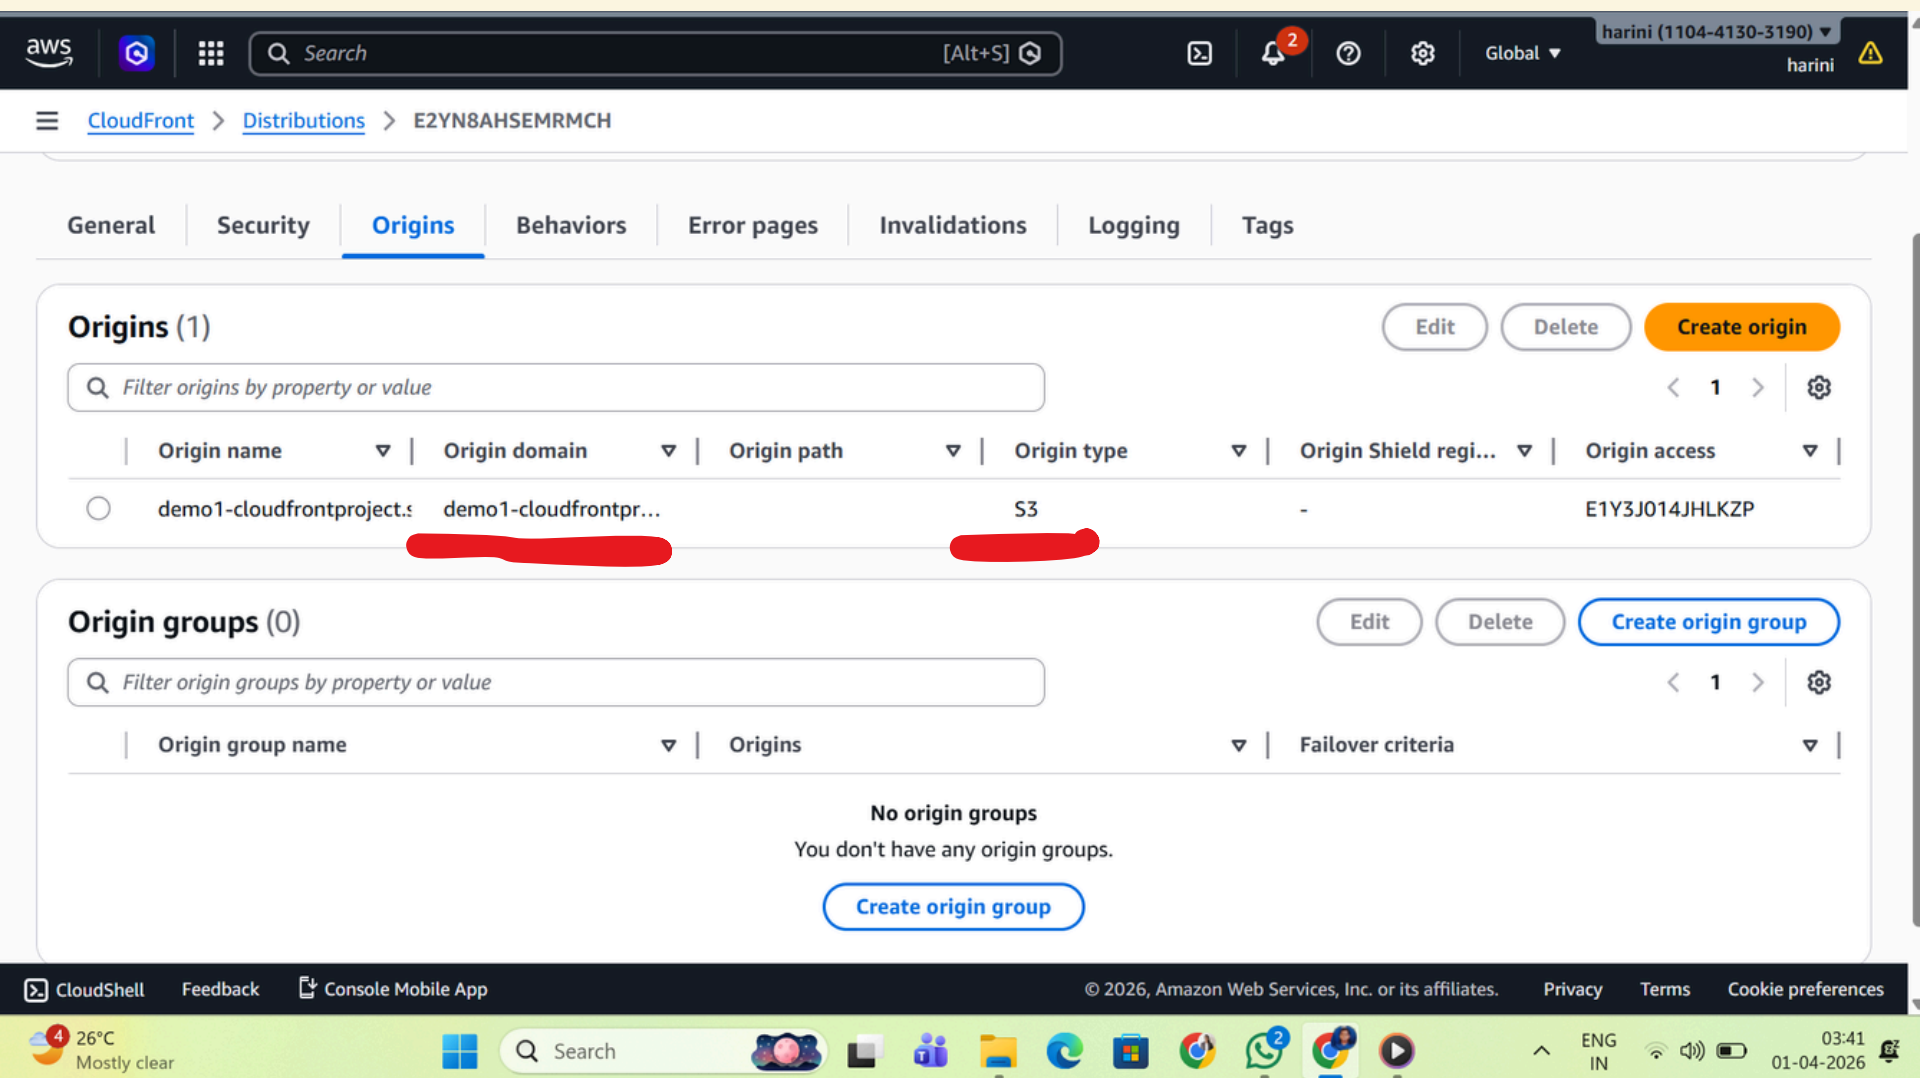

Project Overview

- **Deployment of a static website using Amazon S3**
- **Integration of CloudFront CDN for faster content delivery**
- **Implementation of caching for improved website performance**

Project Objective

- **Host static website files on Amazon S3**
- **Use CloudFront as a Content Delivery Network (CDN)**
- **Improve performance through edge caching**
- **Understand cloud-based website deployment architecture**

Architecture

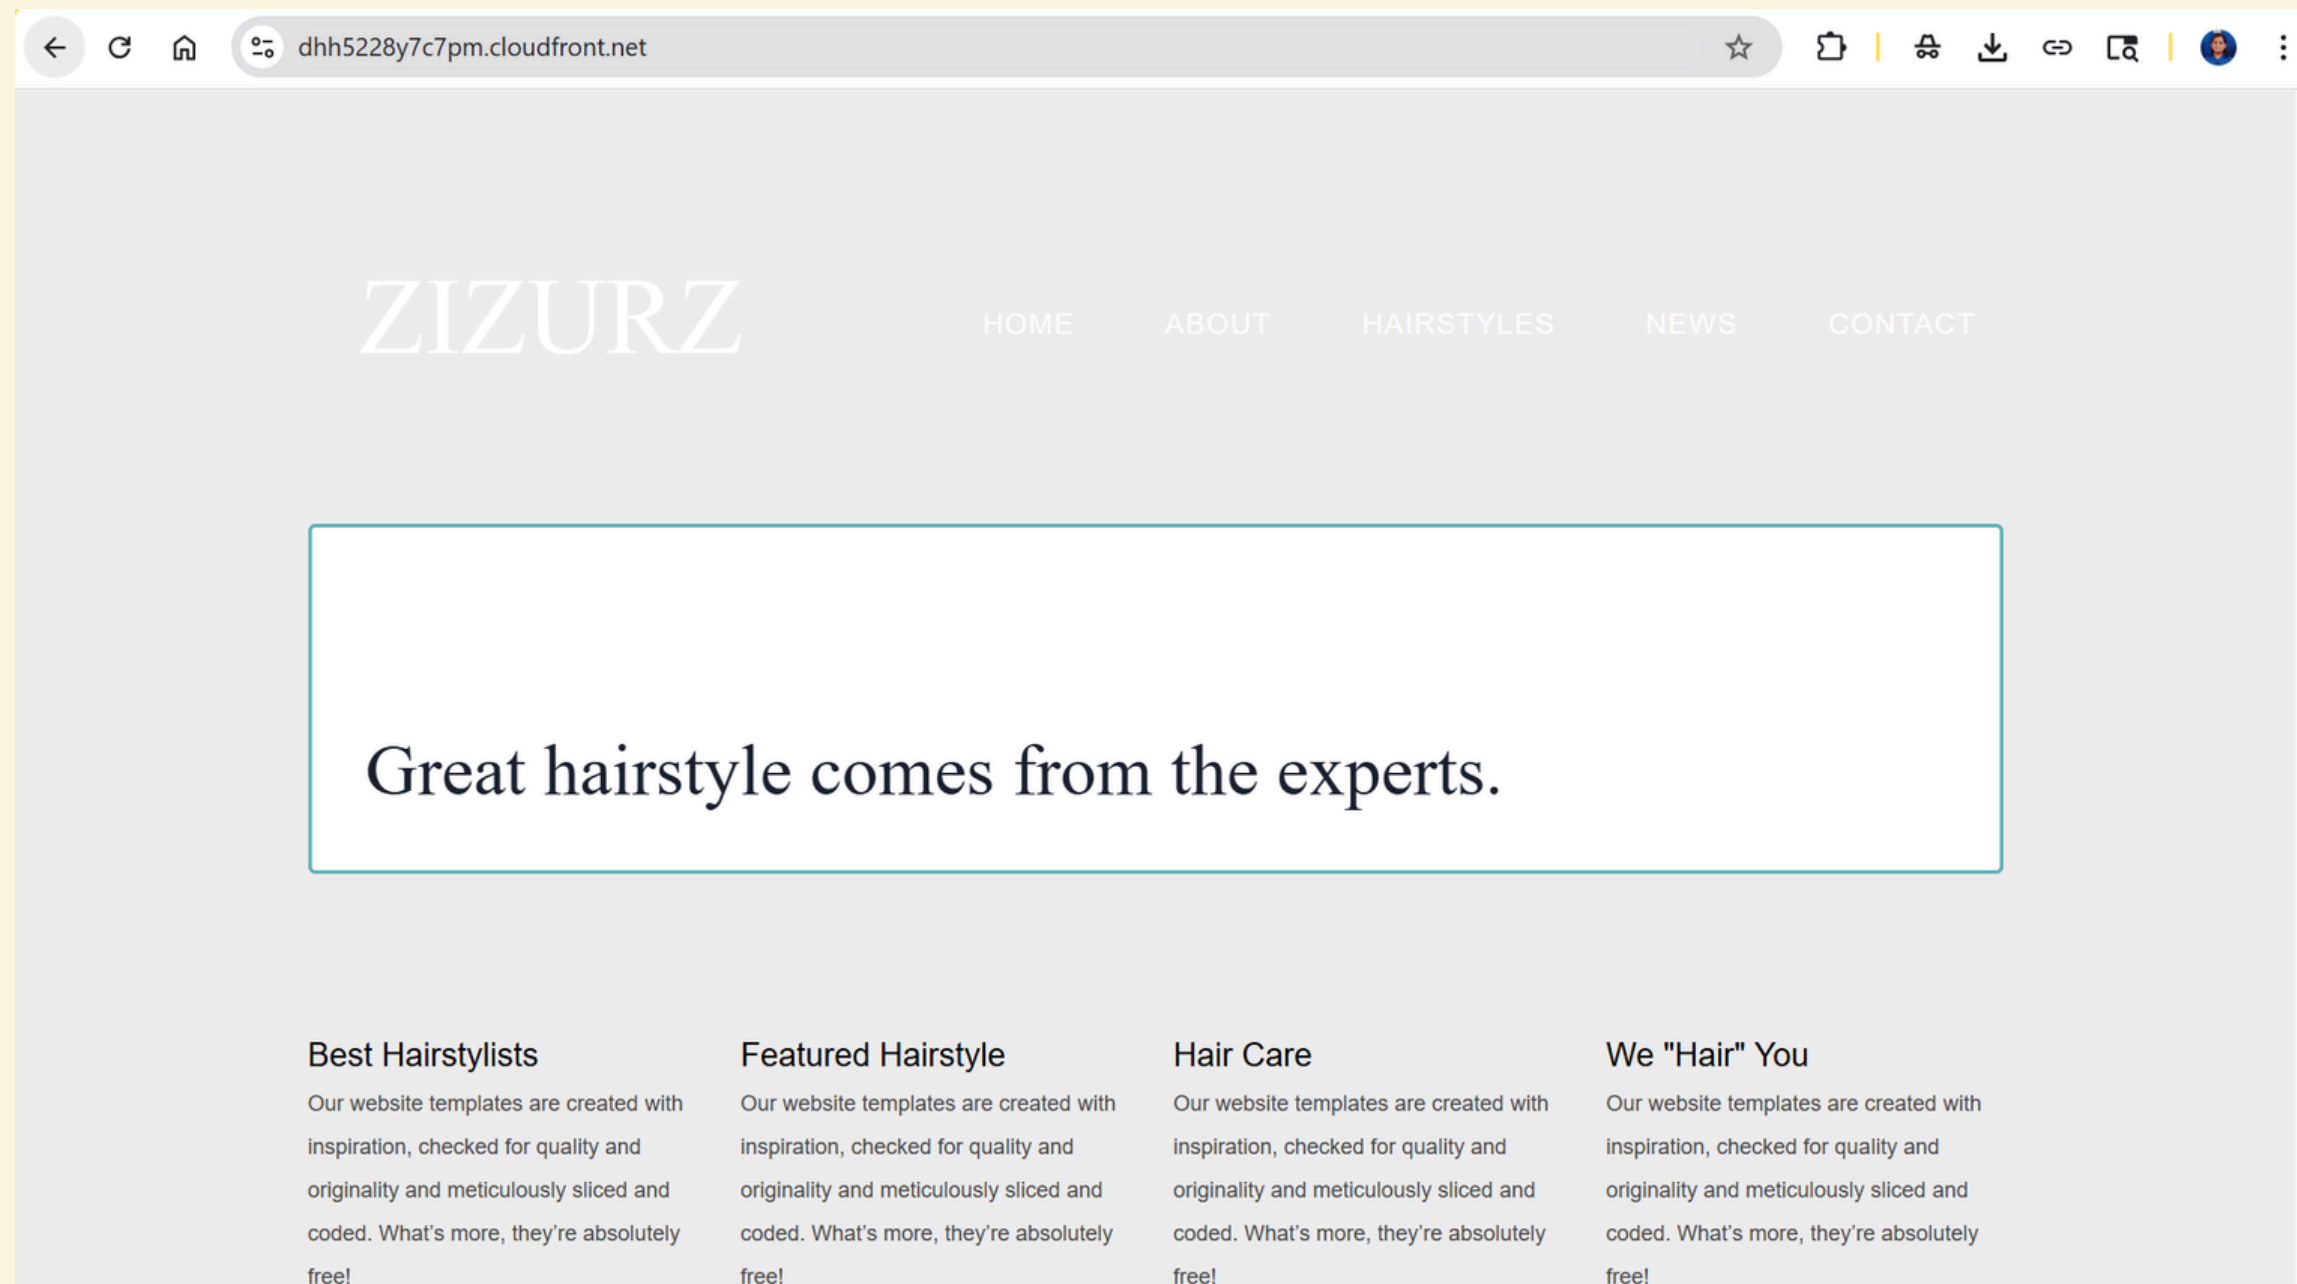

CloudFront distribution configured with S3 as origin

Implementation Steps

- **Created an Amazon S3 bucket**
- **Uploaded static website files (HTML, CSS, images, JS)**
- **Enabled Static Website Hosting in S3**
- **Configured bucket permissions for public access**
- **Created a CloudFront distribution**
- **Connected CloudFront to S3 as the origin**
- **Accessed the website through the CloudFront domain**

Results

Live static website delivered through AWS CloudFront
